

DF and V-LS: special, double overlapping film

DF and V-LS from dy-pack: Rapid deaeration and optimal moisture protection.

Innovations made by dy-pack: A double overlapping film layer with an air release system guarantees optimal moisture protection with fast deaeration. The fast release of air increases the filling density and so improves the filling weight accuracy achieved. Perfectly filled, stable bags make a perfect presentation on the pallet possible.

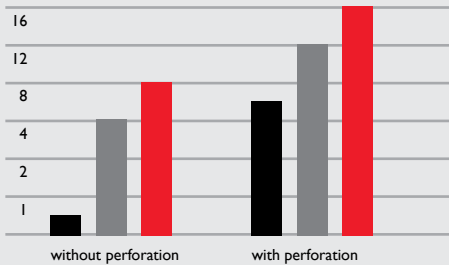

The double film overlap ensures a fast air release and improves the moisture protection.

DF and V-L-S: unique, double overlapping film

Filling speed
DF and V-LS: clearly better

More speed:
Comparison of EF&DF. The benefits derived is clear, faster deaeration gives shorter fill times.

- EF: One overlapping film
- DF: Double overlapping film
- V-LS: Special overlapping film

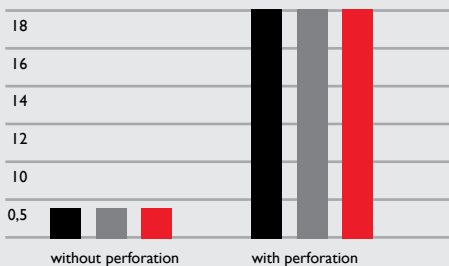

DF and V-L-S: unique, double overlapping film

- Clearly improved moisture protection
- Faster filling speed
- Cleaner filling without dust pollution
- Greater weight accuracy
- Longer shelflife
- Optimised product density – stable palletisation

A cleaner Sack

Using the double overlapping film reduces the maximum pressure during filling. Your production line and the palletised sacks will be much cleaner.

Moisture vapour transmission
DF and V-LS: clearly better

More protection from moisture:
The double film protection gives the same protection as one.

- EF: One overlapping film
- DF: Double overlapping film
- V-LS: Special overlapping film
